Docket No.: 2185-0380P

1. (Currently Amended) A method of producing a composition consisting essentially of comprising a thermoplastic liquid crystal polymer thermoplastic resin and a rubber, wherein a solid rubber is turned into a molten rubber by a rubber kneading machine and the molten rubber is fed into an extruder from the rubber kneading machine, and in the extruder the molten rubber is melt–kneaded with the thermoplastic liquid crystal polymer thermoplastic resin.

AMENDMENTS TO THE CLAIMS

- 2. (Previously presented) The method of producing a composition according to claim 1, wherein the rubber is molten: at a temperature where the viscosity of the rubber on extrusion from a nozzle having a diameter of 0.5 mm and a length of 10 mm at a shear rate of 100 sec⁻¹ is from 100 to 30000 poise; or at a temperature where a melt index of the rubber under a load of 2.16 kgf is from 2 to 20 g/10 minutes.
- 3. (Currently amended) The method of producing a composition according to claim 1, wherein the thermoplastic liquid crystal polymer thermoplastic resin is fed at a downstream position of the extruder relative to the position at which the molten rubber is fed.
- 4. (Previously Presented) The method of producing a composition according to claim 1, wherein the solid rubber has a shape of bale or block.
 - 5. (Canceled)
 - 6. (Canceled
 - 7. (Canceled
 - 8. (Canceled)

Application No. 09/441,199 Amendment dated November 28, 2005 After Final Office Action of July 27, 2005

9. (Canceled)

10. (Currently amended) A method of producing a composition comprising a thermoplastic liquid crystal polymer thermoplastic resin and a rubber, wherein a solid rubber is turned into a molten rubber by a rubber kneading machine and the molten rubber is fed into an extruder from the rubber kneading machine, and in the extruder the molten rubber is melt–kneaded with the thermoplastic liquid crystal polymer thermoplastic resin wherein the rubber is molten:

at a temperature where the rubber's viscosity <u>of the rubber</u> on extrusion from a nozzle having a diameter of 0.5 mm and a length of 10 mm at a shear rate of 100 sec⁻¹ is from 100 to 30000 poise; or

at a temperature where a melt index of the rubber under a load of 2.16 kfg is from 2 to 20 g/10 minutes.

- 11. (Currently amended) The method of producing a composition according to claim 10, wherein the <u>thermoplastic liquid crystal polymer thermoplastic resin</u> is fed at a downstream position of the extruder relative to the position at which the molten rubber is fed.
- 12. (Previously Presented) The method of producing a composition according to claim 10, wherein the solid rubber has a shape of bale or block.

13. (Canceled)
